

Fig. 1 Frequency distribution (in %) for ocean areas containing low level cloud cover in 20 5%-band categories.
Solid line: NR cloud cover without adjustment.
Dashed line: with adjustment.

V at 200 hPa

V at 850 hPa

Fig. 2 Time averaged anomaly correlations between forecast and NR for meridional wind (V) fields at 200hPa and 850 hPa. Anomaly correlation are computed for zonal wave number from 10 to 20 components. Differences from anomaly correlation for the control run are plotted. The experiment with conventional data only is used as the control.
